The Formation of the Scientific Mind Gaston Bachelard, 2002 Gaston Bachelard is one of the indispensable figures in the history of 20th-century ideas. The broad scope of his work has had a lasting impact in several fields - notable philosophy, architecture and literature.

The Rhind Mathematical Papyrus Arnold Buffum Chace,

Teaching Behaviours and Student Achievement Barak Rosenshine, 1971

Teaching Mathematics in Multilingual Classrooms J.B. Adler, 2005-12-21 The author captures three inter-related dilemmas that lie at the heart of teaching mathematics in multilingual classrooms: code-switching, mediation, and transparency. She provides a sharp analysis and strong theoretical grounding, pulling together research related to the relationship between language and mathematics, communicating mathematics, and mathematics in bi-/multilingual settings and offers a direct challenge to dominant research on communication in mathematics classrooms.

Language, Power and Pedagogy Jim Cummins, 2000-09-22 Population mobility is at an all-time high in human history. One result of this unprecedented movement of peoples around the world is that in many school systems monolingual and monocultural students are the exception rather than the rule, particularly in urban areas. This shift in demographic realities entails enormous challenges for educators and policy-makers. What do teachers need to know in order to teach effectively in linguistically and culturally diverse contexts? How long does it take second language learners to acquire proficiency in the language of school instruction? What are the differences between attaining conversational fluency in everyday contexts and developing proficiency in the language registers required for academic success? What adjustments do we need to make in curriculum, instruction and assessment to ensure that second-language learners understand what is being taught and are assessed in a fair and equitable manner? How long do we need to wait before including second-language learners in high-stakes national examinations and assessments? What role (if any) should be accorded students' first language in the curriculum? Do bilingual education programs work well for poor children from minority-language backgrounds or should they be reserved only for middle-class children from the majority or dominant group? In addressing these issues, this volume focuses not only on issues of language learning and teaching but also highlights the ways in which power relations in the wider society affect patterns of teacher-student interaction in the classroom. Effective instruction will inevitably challenge

patterns of coercive power relations in both school and society.

The Slide Valve, Simply Explained William John Tennant,1916

Understanding Disease John Ball,2008-09-04 This book explains with a minimum of jargon how diseases start, what that main symptoms are and how they may affect us. It is intended as a concise guide for those working in alternative medicine and also for those without a medical background who want a clearer understanding of the ways in which common illnesses develop and the terms used to describe them.

The Teaching of Statistics Robert Morris,1989

The Works of Thomas Paine Thomas Paine,1854

From China to Paris Yvonne Dold-Samplonius,2002 The reports of a conference of 11 scholars who began the task of examining together primary sources that might shed some light on exactly how and in what forms mathematical problems, concepts, and techniques may have been transmitted between various civilizations, from antiquity down to the European Renaissance following more or less the legendary silk routes between China and Western Europe.

The Geometry of René Descartes René Descartes,2012-09-19 The great work that founded analytical geometry. Includes the original French text, Descartes' own diagrams, and the definitive Smith-Latham translation. The greatest single step ever made in the progress of the exact sciences. — John Stuart Mill.

TALIS A Teachers' Guide to TALIS 2013 Teaching and Learning International Survey OECD,2014-06-25 This publication not only presents the main results of TALIS 2013, it also offers insights and advice to teachers and school leaders on how they can improve teaching and learning in their schools.

Combinatorics: Ancient & Modern Robin Wilson,John J. Watkins,2013-06-27 Combinatorics is the branch of discrete mathematics that studies (and counts) permutations, combinations, and arrangements of sets of elements. This book constitutes the first book-length survey of the history of combinatorics and uniquely assembles research in the area that would otherwise be inaccessible to the general reader.

The History of Mathematical Proof in Ancient Traditions Karine Chemla,2012-07-05 This radical, profoundly scholarly book explores the purposes and nature of proof in a range of historical settings. It overturns the view that the first mathematical proofs were in Greek geometry and rested on the logical insights of Aristotle by showing how much of that view is an artefact of nineteenth-century historical scholarship. It documents the existence of proofs in ancient mathematical writings about numbers and shows that practitioners of mathematics in Mesopotamian, Chinese and Indian cultures knew how to prove the correctness of algorithms, which are much more prominent outside the limited range of surviving classical Greek texts that historians have taken as the paradigm of ancient mathematics. It opens the way to providing the first comprehensive, textually based history of proof.

Smart Transportation Guido Dartmann, Anke Schmeink, Volker Lücken, Houbing Song, Martina Ziefle, Giovanni Prestifilippo, 2021-11-10 The book provides a broad overview of the challenges and recent developments in the field of smart mobility and transportation, including technical, algorithmic and social aspects of smart mobility and transportation. It reviews new ideas for services and platforms for future mobility. New concepts of artificial intelligence and the implementation in new hardware architecture are discussed. In the context of artificial intelligence, new challenges of machine learning for autonomous vehicles and fleets are investigated. The book also investigates human factors and social questions of future mobility concepts. The goal of this book is to provide a holistic approach towards smart transportation. The book reviews new technologies such as the cloud, machine learning and communication for fully automatized transport, catering to the needs of citizens. This will lead to complete change of concepts in transportation.

A Concise Introduction to Mixed Methods Research John W. Creswell, 2021-07-30 For students and researchers new to mixed methods, *A Concise Introduction to Mixed Methods Research 2e* by renowned author John W. Creswell provides a brief and practical introduction to mixed methods. Many graduate students and researchers in the social, behavioral and health sciences may not have the time or resources to read long treatises or stacks of journal articles on mixed methods research. This text quickly describes the basics of setting up and conducting a study using this methodology. Chapters are short and follow the process of research, from ensuring skills for conducting research, acknowledging the steps in planning a study, designing studies with increasing complexity, planning sampling strategies and integration, and writing up the results of your study. Get started in mixed methods quickly with this brief primer.

The New Penguin Dictionary of Computing Dick Pountain, 2001 An A-Z of computing terms and concepts, *The New Penguin Dictionary of Computing* is the definitive book of its kind. Covering everything from A20 gate to zero-wait-state memory, and from floppy disk to Word for Windows, it will be an essential tool not only to programmers and engineers, but to anyone who owns or has access to a computer and wishes to improve her skills.

The Universal History of Numbers Georges Ifrah, 1998 The book explores the science of numeration as it has developed all over the world, from Europe to China, via the Classical World, Mesopotamia, South America and, above all, India and the Arab lands.

Buyology Martin Lindstrom, 2010-02-02 NEW YORK TIMES BESTSELLER • “A fascinating look at how consumers perceive logos, ads, commercials, brands, and products.”—Time How much do we know about why we buy? What truly influences our decisions in today’s message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands,

and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “cool” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? Buyology is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.
